

STEERING SKI DEVICE FOR SNOWMOBILE

Abstract of the Disclosure

A ski for a snow vehicle includes a ski body, a ski mounting bracket, a keel, a wear bar, and a glide member. The ski body includes a generally horizontal surface that contacts the snow when the ski is in use. The ski mounting bracket is located on a top side of the ski body. The glide member depends from the ski and is mounted at a position lower than the lowest most part of the wear bar.
